

Perfect Wax

Concrete Release Agent

HOW To Apply

The PERFECT WAX concrete release agent is designed to outperform oil and water-based systems and cost avoid labor and materials cost over conventional release agents.

Steps to apply the wax:

1. Open lid on container of wax bucket
2. Apply wax utilizing a brush, roller, sponge or simple rag to a thin coat of wax to the form mold Schlüsselbauer recommends a coating between 1-mil thickness
3. Can be applied to any surface concrete will touch I.E. Metal, Wood, Foam, plastics and silicones for a perfect finish every time

Oil release agent's coverage compared to wax is a follow below:

- Oil based products range in coverage **1000sqft** not calculating loss of product due to overspray and evaporation that occurs.
- Wax based product is a semi-solid formula that does not drip, drop or run unlike oils ensuring that our clients receive the full **3200sqft** of coverage at (1-mil thickness) per gallon giving 3x the coverage area over oil with no overspray and no evaporation.
